ApexMart - Executive Summary & Business Insights

Project Overview 📖

- **Problem:** Discrepancies in sales and returns reports across different channels, with raw data full of errors.

Objective: Unify data, build an accurate Data Model, and create a management dashboard.

Achievements: Cleaned hundreds of thousands of records, merged tables, built KPIs, and discovered profitability and returns trends.

What was the monthly sales trend, and what caused the fluctuations?

👁 **Observation:** Sales suffered a sharp decline mid-year and stagnated in Q3, followed by a significant recovery at year-end.

📊 **Evidence:** After a severe drop in June, December recorded a positive spike, achieving a MoM growth rate of **+19.04%** compared to November.

💡 **Recommendation:** Analyze the marketing promotions implemented in December and apply similar campaigns during stagnant months (Q3) to stimulate sales throughout the year.

Are the best-selling products the most profitable for the company?

👁 **Observation:** Laptops generate the highest revenue, but their profit margins are noticeably lower compared to monitors and appliances.

📊 **Evidence:** The "NovaBook Pro 15" achieved the highest revenue of **$158M** with a profit margin of **15.7%**, while products like the "Pulse 27 Monitor" achieved a higher margin of **21.9%**.

💡 **Recommendation:** Implement cross-selling strategies to bundle high-revenue laptops with high-margin monitors to maximize overall net profits.

Which categories lead in return rates, and how can we mitigate them?

👁 **Observation:** The Furniture category records the highest return rate, costing the company significant amounts in reverse logistics.

📊 **Evidence:** The Furniture category topped the returns list with a rate of **2.76%**, surpassing both Electronics and Home Appliances.

💡 **Recommendation:** Review shipping partners handling furniture to prevent transit damages, and add precise details (dimensions and 3D images) to the web store to reduce "expectation mismatch" returns.

Which geographical regions are driving the company's sales?

👁 **Observation:** Regional performance is highly competitive, with all regions successfully exceeding their sales targets, led slightly by the West region.

📊 **Evidence:** The West region led sales with a total of **$126.4M**, closely followed by the North region at **$125.5M**.

💡 **Recommendation:** Reward the West and North regional managers, and transfer their successful field sales strategies to the Central region to boost its performance.

Who are the top-performing employees, and what sets them apart?

👁 **Observation:** Employees from the "Cairo Downtown" store dominate the top positions in individual sales with a consistent "Good" rating.

📊 **Evidence:** "Adam Mostafa" ranked first, exceeding **$15.3M** in sales with an exceptionally high average order value of **$26,592** per order.

💡 **Recommendation:** Promote Adam Mostafa as a sales trainer to coach new teams on upselling techniques and how to consistently increase the Average Order Value (AOV).
